# LUCIDITY VIDEO WALL MANAGEMENT SOFTWARE

**LUCIDITY**  
Developed by  **ULTIMATE**  
Visual Solutions

## Simple Yet Supremely Powerful

**The Lucidity video wall manager control platform has been designed from the ground up, to ensure it's fully functional and simple to use.**

UVS have over 70 years' combined experience in the video wall control market, which has evolved in to the Lucidity video wall manager platform. Each of the features within Lucidity have been influenced by customer feedback over the years.

The Lucidity video wall manager control platform allows for multiple source types including RSS / message box tickers, physically attached sources e.g. HDMI, IP Camera / IPTV streams, web pages and even remote desktop display & control (LVC – Lucidity View & Control).

## Quick Creation of Wall Layouts, Presets and Templates

**Your video wall can be populated by a simple drag and drop action with display templates or sources.**

You can treat your video wall as one large display or apply templates to each display individually; allowing you to have an infinite number of display layout configurations. Sources can be changed by simply dropping a new source on top of an existing source. No need for the lengthy process in closing the existing window, putting the new source on the wall and then resizing it to fit.

Once your wall layout has been created, you can save the layout as a wall preset, allowing for quick recall via the Lucidity client application or via workstation F Keys, remote API commands or using the built-in web-based preset launcher. Layouts can also be created in "offline mode" without affecting the live layout of the video wall, for seamless and unobtrusive configuration.

## Full User Rights Management and Logging

**Users' access can be restricted to specific functions including the limitation of available video wall areas or sources.**

Each action within Lucidity is logged to an individual user and the extensive logs can easily be retrieved for full user accountability. Users can be generated within the Lucidity wall manager Client or users can be authenticated against an existing LDAP / Active Directory server.

## Remote Control Your Sources

Once a source is being displayed on your video wall, the control functionality doesn't stop there.

Users can be given the rights to remote control web pages; for actions such as zooming in/out or even logging in to restricted sites for viewing analytical data on the wall. Remote desktops can be displayed and controlled within the Lucidity wall manager client using the LVC feature (Lucidity View & Control).

When used alongside a Lucidity WBC video wall controller, you can also see a live view of the video wall within the Lucidity client application.

### Lucidity Video Wall Manager Features

Customisable Users and Groups*	Creation of Wall Presets
Active Directory Integration*	Preset Launcher Scheduler
LVC – Lucidity View and Control of remote workstations	Creation of Wall Areas
IP Camera Source decoding and display	Global Hot Key Manager
Message Box Sources	Wall Preview
Message Box RSS Feeds	TCP/IP API Control
Website Sources	RS232 API Control
RGB Sources	Colour Alarm Manager*
Creation of Tile Templates	Macros – remote device control
Audio Control of HDMI Sources (requires specific input card types)	Carousel for IP and RGB sources (requires specific input card types)
Preset launcher browser app	* Optional

**Note:** Specifications subject to change.

# LUCIDITY

Developed by  **ULTIMATE**  
Visual Solutions

**Lucidity, the ultimate management interface for your video wall. Powerful and flexible software that is simple to use.**

UVS (Ultimate Visual Solutions) provide turnkey solutions for all types of audio visual and visual display applications. Our projects range from a single display screen in a conference room to a multi-screen video wall system within a 24/7, mission-critical operation such as a Data Centre or Special Operations Room.
